The image shows a VITRAN Route 6 bus at Titan Gas Station in St. Croix after crashing into a fuel pump following a collision with a private vehicle.

A V.I. Transit (VITRAN) Route 6 bus was involved in a traffic accident early Friday morning in the La Grande Princess area of St. Croix, according to the V.I. Department of Public Works. The incident occurred at approximately 7:39 a.m. on Route 75, with DPW initially stating the crash

occurred "near the Titan Gas Station."

However, photographic evidence obtained by the Consortium shows that the VITRAN bus actually collided into the Titan Gas Station itself, striking one of the fuel pumps. The damage appears to have been the result of a sequence of events in which the VITRAN bus made contact with a privately operated vehicle before continuing forward into the station's forecourt area.

Emergency personnel were dispatched to the scene, and an investigation is ongoing to determine the full circumstances of the collision, including the sequence of impacts. As of Friday afternoon, no details have been released regarding potential injuries, how many individuals were on board the bus, or the condition of the driver of the private vehicle involved.

DPW has requested patience from the public as emergency responders and relevant agencies work to complete their investigation.
