Viya on Wednesday announced the launch of its WiFi+ and TV+ offerings.

"Virgin Islanders are demanding more and better connectivity options," Viya said, adding that it has been investing in increasing its capacity and is aware of the challenges of the current situation.

"WiFi+, which is currently available, provides the best solution for the territory's residential and business clients to further enhance Viya's exemplary internet product by expanding the WiFi signal throughout the home or business for stronger, more consistent coverage," Viya said.

The company introduced a new, 4K, fully digital TV platform for what it said will be "greatly enhanced TV streaming experience": Viya TV+

Improved features include:

- Bluetooth-enabled remote control, access to a complete Video on Demand library including New Releases. FREE Cloud DVR storage included in all of our Viya TV+ subscriptions (additional hours available for purchase); A FREE mobile app & web link for any iOS and Android device, PC or laptop. This App will not only allow subscribers to access recorded/saved programming on-the-go, but also view Live programming on favorite channels.
- Improved guide, more channels, advanced search options and so much more. In an effort to effectively meet the technology needs of public school students, the Virgin Islands Department of Education is requesting the cooperation of parents with students enrolled in USVI public schools to complete the “Home Technology Information Form,” found at the “COVID-19 Forms” link on the Department’s website, www.vide.vi.

Viya said it looks forward to sharing this new product which it said really sets it apart from other content providers.

"The launch of both of these services, at a time when connectivity and entertainment are paramount, proves that Viya continues to invest in the community by providing the best technology," the company said.

For more information about WiFi+ and ViyaTV+, customers are encouraged to visit Viya’s website at www.viya.vi.
