Consumer Service Station in Frederiksted By. VI CONSORTIUM

ST. CROIX — The Dept. of Planning and Natural Resources announced today that the Division of Environmental Protection has issued a fuel delivery prohibition against the owner and/or operator of Consumer Service Station located 17 DB Estate Plessen, Frederiksted.

"This action prohibits the facility from having any regulated substances, including but not limited to petroleum products, delivered to its underground storage tank (UST) system," D.P.N.R. said.

The government agency said it has identified the following violations that resulted in the fuel delivery prohibition:

1. 12 V.I.C. §655, 658(a), 660 – Failure to register tanks and obtain “Permit to Operate (PTO) UST System”.
2. 12 V.I.C. §669(a) and (c) – Failure to secure financial responsibility/coverage of Insurance.

"Today's announcement holds the owner and/or operator Consumer SS accountable for their conduct and ensures the public is protected," D.P.N.R. said. "Failure to register the tanks and secure required insurance coverage can pose a serious safety risk, as leaking underground tanks can release toxic components that can seep into the soil and the groundwater."

D.P.N.R. said the action seeks to hold the owner and/or operator of Consumer SS responsible for properly managing their tanks to reduce these risks.

The government agency said petroleum products such as gasoline contain chemical compounds that pose substantial threats to human health. When operated conscientiously and monitored closely, underground storage tanks are a safe and effective means to store gasoline.

"But when those tanks are not subjected to basic operational safeguards, they can endanger the public and the environment, for example by leaking petroleum into the water supply, discharging toxic vapors into the air, or even triggering fires or explosions," said D.P.N.R.

DPNR said its regulations are designed to protect the public by requiring underground storage tank operators to reduce the likelihood of leaks, monitor for leaks so they can promptly be addressed, and maintain adequate insurance to conduct corrective action and compensate injured third parties when a leak occurs.

As of Monday evening, the gas station was conducting business.
