From the V.I. Port Authority: "NASA is on St. Croix! The National Aeronautics and Space Administration team will be conducting weather observations at the Henry E. Rohlsen Airport and on the north side of St. Croix. This is a first for the big island as NASA usually conducts this research in San Juan in this region. We are excited to have them here in the USVI! See attached photos of the aircraft at the Henry E. Rohlsen Airport." See pics [here](#).
